

Proactive Defense in Transportation: Securing Operations with Advanced Threat Intelligence

Industry: Public Sector - Transportation
Company Size: 1000+ employees

Business Problem

The client faced sophisticated, coordinated cyber threats targeting sensitive data, including logistics, passenger information, and fleet operations. The company needed a proactive solution to anticipate, detect, and neutralize emerging threats, ensuring the security and integrity of its operations and infrastructure.

How Intertec Helped

Intertec deployed a tailored Threat Intelligence solution to proactively address cyber threats, seamlessly integrating it into the client's security infrastructure.

- **Global Sensor Network:** 20M+ sensors across 175+ countries, processing 285B events daily.
- **Proactive Threat Detection:** Identified and mitigated risks before they compromised operations.
- **Seamless Integration:** Automatically integrated into the client's security infrastructure for real-time responses.
- **Continuous Security:** Ensured operational resilience and robust defense against evolving threats.

Business Outcomes Delivered

Intertec's solution helped the client achieve the following:

- **Focused Intelligence:** Prioritized valuable intelligence, minimizing open-source noise, and derived key indicators from real attack telemetry.
- **Automated Investigations & Enrichment:** Streamlined malware research and sped up the investigative process through automation.
- **Comprehensive Analysis:** Delivered deeper insights into attacks, revealing whether malicious files were part of larger campaigns or targeted threats.
- **Intelligence Orchestration:** Integrated IoCs directly into the client's security infrastructure, preventing future attacks.
- **Improved Analyst Efficiency:** Enhanced response playbooks and automated incident handling, allowing analysts to manage more incidents effectively.
